Keyhole Piano Hovering Insert Installation Brief

Instructions for installing the Keyhole hovering panel into a compatible piano shell.

Tools Needed
Required tools - ¼" hex head driver

Recommended tools (nutdriver above not necessary with these tools) - drill driver, ¼" extension rod, ¼" hex bit
Instructions

Note on 50-inch and larger models: you may need to remove the upright supports to allow the panel to fit/slide into the opening on the front of the piano

Prepare the panel by attaching the hardware as shown.

With the piano carefully positioned upside down as shown [and with the sides open if TurnKey], slide the panel into position.
The insert is the same size as the rim opening, so line up the panel to match.

Use [the supplied] ⅜" long hex head screws to anchor each bracket to the rim.
